SUMMARY

B.Tech student at IIIT Nagpur (2027) who builds and ships AI web apps end to end. Works across the stack: interactive 3D and streaming front ends in React and Next.js, typed API routes in Node.js, and LLM agent back ends. Looking for a full-stack or frontend internship.

SKILLS

Languages	TypeScript, JavaScript, Python, C++, Java, HTML, CSS, GLSL
Frontend	React, Next.js (App Router), React Three Fiber, three.js, responsive and accessible UI
Backend	Node.js, REST and streaming APIs, Flask, FastAPI, PostgreSQL, MySQL, MongoDB
AI	LLM APIs (Groq), tool calling, structured outputs, RAG, LangChain, LangGraph, Whisper speech-to-text
Tools	Git, GitHub Actions, Vercel, MLflow, DVC, Apache Airflow

PROJECTS

Repoverse 3D codebase explorer. Next.js, TypeScript, React Three Fiber, Groq — Live | Code

- Built a web app that turns any GitHub repository into an interactive 3D star chart and explains each file with a streamed LLM response.
- Wrote a deterministic 3D layout algorithm for folder trees and rendered up to 1,200 files with instanced meshes in a handful of draw calls.
- Implemented retrieval without a vector database: a fast model picks files from the tree, the server fetches them, and a larger model answers with file references.

Hivemind Multi-agent orchestration with a live 3D trace. Next.js, TypeScript, Groq tool calling — Live | Code

- Built an orchestrator that plans a goal into a task graph with structured outputs, then runs up to six of eleven specialist agents in parallel with dependencies.
- Implemented a tool-calling loop (Wikipedia lookups and a hand-written expression parser, so model output is never executed as code) and validated every plan before running it.
- Streamed each step as newline-delimited JSON; one reducer drives both the run log and a 3D honeycomb visualisation.

VoxUI Voice-to-interface generator. Next.js, TypeScript, GLSL, Web Audio, Whisper — Live | Code

- Built a voice-driven tool: speech is transcribed with Whisper, a complete HTML interface streams into a live preview, and it can be refined by voice.
- Ran untrusted generated code safely in a sandboxed iframe behind a strict Content-Security-Policy, enabling scripts only after the stream completes.
- Added self-healing: script errors in a generated page are caught and sent back to the model for an automatic fix, and pages are built on a small design kit so output stays consistent.

Auto Angular Component Generator LangChain, LangGraph, Vercel — Live

- Built an agentic system that generates Angular components (TypeScript, HTML templates, SCSS) from natural-language descriptions, using multi-step planning in LangGraph.
- Added validation and self-correction loops to improve output quality, and deployed it as a full-stack web app on Vercel with streaming inference.

Multimodal AI Doctor Assistant Whisper, LLM, Gradio — Live

- Built a voice, vision and text assistant with speech-to-text and text-to-speech pipelines, deployed through API-backed Gradio interfaces.

EDUCATION

Indian Institute of Information Technology, Nagpur — Aug 2023 – May 2027
B.Tech in Electronics and Communication Engineering, Minor in IoT. CGPA: 7.26

ACHIEVEMENTS AND LEADERSHIP

- Solved 200+ problems on LeetCode.
- Finalist, CEO Event, VNIT Nagpur.
- Core Member, E-Cell, IIIT Nagpur (Oct 2024 – Aug 2026). Public Relations Team Lead, E-Summit, IIIT Nagpur (Feb 2026).
- Team Head for the DIP project, leading experimentation and technical execution.
