SUMMARY

Full-stack developer and B.Tech student at IIIT Nagpur (2027) with 4 months of industry experience building a company CRM in React, Next.js, Node.js and SQL. Ships AI web apps end to end: interactive 3D and streaming front ends, typed APIs, and LLM agent back ends. Looking for a full-stack or frontend internship.

SKILLS

Languages	TypeScript, JavaScript, Python, C++, Java, HTML, CSS, GLSL
Frontend	React, Next.js (App Router), React Three Fiber, three.js, responsive and accessible UI
Backend	Node.js, Express, REST and streaming APIs, authentication and RBAC, Flask, FastAPI, PostgreSQL, MySQL, MongoDB
AI	LLM APIs (Groq), tool calling, structured outputs, RAG, LangChain, LangGraph, Whisper speech-to-text
Tools	Git, GitHub Actions (CI/CD), Vercel, MLflow, DVC, Apache Airflow

EXPERIENCE

Full-Stack Developer T&A IT Consulting Services — Jul 2026 – Oct 2026

- Built the company's CRM as a full-stack web application, with a React and Next.js front end, a Node.js and Express REST API, and a SQL database.
- Implemented authentication and role-based access control, so admins and staff can see and change only the records their role allows.
- Integrated third-party APIs into the CRM's workflows, and set up deployment with a CI/CD pipeline so changes ship automatically.

PROJECTS

Repoverse 3D codebase explorer. Next.js, TypeScript, React Three Fiber, Groq
repoverse-phi.vercel.app | github.com/Priyanshu-bhati23/Repoverse

- Turns any GitHub repository into an interactive 3D star chart and explains each file with a streamed LLM response.
- Wrote a deterministic 3D layout algorithm for folder trees and rendered up to 1,200 files with instanced meshes in a handful of draw calls.
- Implemented retrieval without a vector database: a fast model picks files from the tree, the server fetches them, and a larger model answers with file references.

Hivemind Multi-agent orchestration with a live 3D trace. Next.js, TypeScript, Groq tool calling
hivemind-7zwb.vercel.app | github.com/Priyanshu-bhati23/Hivemind

- Built an orchestrator that plans a goal into a task graph with structured outputs, then runs up to six of eleven specialist agents in parallel with dependencies.
- Implemented a tool-calling loop (Wikipedia lookups and a hand-written expression parser, so model output is never executed as code) and validated every plan before running it.

VoxUI Voice-to-interface generator. Next.js, TypeScript, GLSL, Web Audio, Whisper
vox-ui-wheat.vercel.app | github.com/Priyanshu-bhati23/VoxUI

- Built a voice-driven tool: speech is transcribed with Whisper, a complete HTML interface streams into a live preview, and it can be refined by voice.
- Ran untrusted generated code safely in a sandboxed iframe behind a strict Content-Security-Policy, enabling scripts only after the stream completes.
- Added self-healing: script errors in a generated page are caught and sent back to the model for an automatic fix, and pages are built on a small design kit so output stays consistent.

Auto Angular Component Generator LangChain, LangGraph, Vercel — Live demo

- Agentic system that writes Angular components (TypeScript, HTML, SCSS) from plain-language descriptions, with LangGraph planning, validation and self-correction loops; deployed on Vercel with streaming.

Multimodal AI Doctor Assistant Whisper, LLM, Gradio — Live demo

- Voice, vision and text assistant with speech-to-text and text-to-speech pipelines, served through a Gradio interface.

EDUCATION

Indian Institute of Information Technology, Nagpur — Aug 2023 – May 2027
B.Tech in Electronics and Communication Engineering, Minor in IoT. CGPA: 7.26

ACHIEVEMENTS AND LEADERSHIP

- Solved 200+ problems on LeetCode. Finalist, CEO Event, VNIT Nagpur.
- Core Member, E-Cell, IIIT Nagpur (Oct 2024 – Aug 2026). Public Relations Team Lead, E-Summit, IIIT Nagpur (Feb 2026).
